

Technical Specification

Decolorado Gris Erosion

Engineered Wood Flooring

fuseflooring.com

**FU
SE** WOOD FLOORING

Product

Collection	Energia Natural
Name	Decolorado Gris
Style	3-strip
Finish	Matte lacquer
Surface	Erosion*

Wood

Species	White Oak
Treatment	None
Grade	Natural
Cut	Flatsawn
Hardness	1360 (Janka scale*)
Colour change	Slight darkening

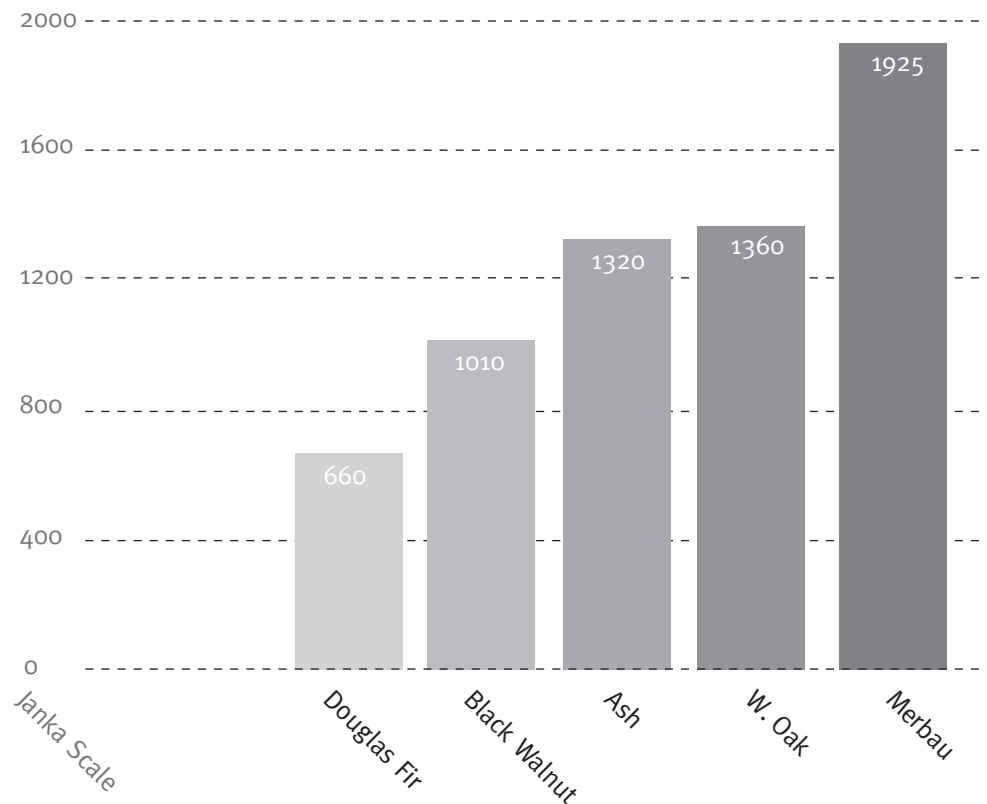

Construction

Type	Engineered hardwood
Layers	3-layer
Edge	Bevel 2-sides
Connection	Tongue & Groove
Dimensions	14 x 210 x 2190 mm

Layers

Lamella Material	White Oak
Thickness	4 mm
Core Material	Spruce
Thickness	10 mm
Backing	Spruce Ply

Relative wood hardness

Notes

Wood colour variation

All wooden floors have natural colour variation. Untreated floors will have some colour variation, depending on the species. Stained floors generally have less colour variation. Smoked floors have more colour variation. Please be aware of the amount of variation to expect by looking at the 'wood - treatment' section, or contact a sales representative for pictures and further information.

Wood colour change

Wood changes colour when exposed to sunlight. This process is called 'oxidization' and happens over a period of several months to several years, depending on the species. Different species will change different colours over different periods of time. Note that certain finishes also oxidize and this colour change is in addition to the wood's oxidization.

Wood hardness

The Jenka hardness scale is determined by the amount of force required to embed an 11 mm steel ball half-way into the wood. A higher rating is a harder wood. Note that this does not indicate a product's resistance to scratching, just denting.

Surface

Energia Natural uses different terms to refer to their finishes. They are more complex than simple 'brushed' or 'sanded.' For convenience, this is how they translate:

"Erosion" is similar to "sanded"

"Envejecido" is similar to "brushed"

"Corte" is bandsawn.
